

Million-Dollar Plant of Globe Grain & Milling Company

Feed Mill Under Construction.

One million dollars will be expended before the Ogdan plant of the Globe Grain and Milling company, of which Wm. E. Keller is president and J. H. Waugh, construction engineer, is completed. Part of that large sum is now represented in

storage of 25,000 bushels, or a total of 600,000 bushels with the smaller bins included.

Electrical Safeguards.

Throughout the structure is equipped with electric signal devices, and automatic safety cut-outs on all machinery. From any floor all the machinery can be stopped instantly.

There is an intercommunicating telephone system extending to the entire building from top to bottom.

In cleaning the grain the machinery employed consists of two receiving separators of 5000-bushel capacity an hour; five milling separators of 600 bushels an hour each; two oat separators, 350 bushels an hour each; and two wheat washers of 850 bushels an hour each.

Wheat and corn must be dried. So there is a drying department consisting of a drier of 1000 bushels capacity an hour.

This drier will be used principally for corn in transit from the corn states to the coast. At certain times of the year quantities of corn will be shipped, to be treated and stored in Ogdan for future delivery in the northwest or further down the coast.

Large Boilers.

This drier will be operated by a 150-horsepower tube boiler, in addition to a 150-horsepower boiler for general

J. H. Waugh, Engineer in Charge of Construction.

top of the tank is a 75-foot flagpole, flying a flag 260 feet above the ground.

There are 20 tanks occupying a ground space of 82 feet by 102 feet and reaching to a height of 100 feet. There are also track sheds 58 feet by 90 feet.

The feed mill, now under construction, a view of which is herewith presented, will be 30 feet by 50 feet, three stories.

The molasses tanks, made of concrete, will have 150,000 gallons capacity and will be under the warehouse. For empty-tank storage, there will be a building 50 feet by 40 feet. Provision is made for a sack-storing room. On a balcony, shower bath, lavatories, wash basins and other comforts will be placed for the employees.

Mill of 2,500 Barrels

In the spring the foundation will be laid for the flour mill, which will be six stories, 50 feet by 160 feet and have an output of 2,500 barrels daily. The first unit should be turning out baked and family flour before the winter.

A one-story flour warehouse will occupy ground space of 50 feet by 250 feet.

Located directly in front of the main structure, but across the tracks, will be the general office building, 50 feet by 75 feet, containing the general office

equipment, chemical laboratory and sample storage rooms.

Tunnel Under Tracks

Leading from the office to the plant, a tunnel, under the tracks, will come up in the center of the elevator. Traveling from one part of the plant to another part is so arranged as to be entirely underground.

North of the elevator proper and east of the flour mill will be the power station house, in which there will be boilers of 300 horse-power, machine shop and switch board.

North of the office building is to be built a garage for housing automobiles and trucks.

One Hundred Cars

The handling capacity of the elevator will be 100 cars a day. Each unit of the flour mill will produce 1,250 barrels of flour a day, or eight carloads.

Thousands of Flour Barrels

The storage capacity of flour will be 15,000 barrels.

Ultimately the office force will total 15 employees and the industry will have 75 to 100 men and women on its pay-roll.

This is the beginning of the largest industry, in point of tonnage in manufacturing, so far established in Ogdan.

AWAY WITH THOSE ACHES AND PAINS

Keep Sloan's Liniment handy to put the "feel good" back into the system.

ALL it needs is just one trial—a little applied without rubbing, for it penetrates—to convince you of its merit in relieving sciatica, lumbago, neuralgia, lame muscles, stiffness, bruises, pains, aches, and strains, the after-effects of exposure.

The congestion is scattered, promptly, cleanly, without effort, economically. You become a regular user of Sloan's Liniment, adding your enthusiasm to that of its many thousands of other friends the world over, who keep it handy. Three sizes at all druggists—25c, 70c, \$1.40.

Masked Robbers Kill Two Men And Loot Inn

PORTLAND, Ore., Nov. 22.—Three masked robbers shot and killed Newton Burgess of Pendleton, state highway commissioner, and George Perlinger, a rancher of Pendleton, while they were at dinner in the Claretton tavern, 12 miles from Portland, at midnight last night. The robbers also looted the inn.

HAVE COLOR IN CHEEKS Be Better Looking—Take Olive Tablets

To have a clear, pink skin, bright eyes, no pimples, a feeling of buoyancy like childhood days, you must keep your body free from poisonous wastes. Dr. Edwards' Olive Tablets (a vegetable compound mixed with olive oil) act on the liver and bowels like calomel yet have no dangerous after effect. Take one nightly and note results. They start the bile and overcome constipation. That's why millions of boxes are sold annually 10c and 25c.

Earnings of Federal Farm Loan Banks \$858,033 Is Report

WASHINGTON, Nov. 22.—Earnings of the federal farm loan banks during the six months ending November 1, were \$858,033, according to figures made public today by the farm loan board. This was a gain of more than \$25,000 over the previous half year.

many places, including Denver and Pueblo, Colo., where the band is reported to have been seen. Little credence is placed in these and yet officials here admit there is nothing more definite than rumors concerning the band's hiding place.

Governor Carey was asked today to offer a reward for the capture of the band. He promised to do so if the prosecuting attorney of the county in which the robbery occurred would ask it. The only reward now offered is one of \$200 from the state prison at Rawlins, where Carlisle was confined up to his escape last Saturday.

A considerable sentiment has developed in favor of the band because of its daring and courteous treatment of the women and children passengers and the possibility that friends might be aiding the fugitive was taken into consideration.

He left last night for Logan, where he will inspect the military organizations at the U. A. C., and on Monday will look over the organization of the R. O. T. C. at the University of Utah at Salt Lake.

A CHEERFUL RECOMMENDATION. "They should be in every traveling man's grip," writes George Jenner, 116 Labor street, San Antonio, Tex., of Foley Cathartic Tablets. "They are the best laxative I have taken and I cheerfully recommend them to anyone suffering with constipation or biliousness." They thoroughly cleanse the bowels, sweeten the stomach and benefit the liver. They correct indigestion, bad breath, bloating, gas, coated tongue and other results of sluggish bowels. No griping, no nausea. A. R. McIntyre Drug Co., Advertisement.

Industrial Workers Subdued by Liberal Use of Jail Hose

SPOKANE, Wash., Nov. 22.—Twenty-three wet Industrial Workers of the World spent the night in a dark cell at the city jail and fifty others thoroughly soaked were held in the main part of the jail after they had been subdued by a fire hose.

Late yesterday the men in protesting against the quantity of food they received slammed their beds against the bars and refused to cease the noise they were making until a hose was turned on them.

Inspects Cadets

Colonel Moore N. Falls, district engineer of the R. O. T. C. Co., who inspected the military units of the Ogdan High school yesterday, was pleased with the showing made by the boys.

Col. Falls complimented Superintendent Hopkins and Lieut. Everly, drill instructor at the high school on the excellent beginning of the local units. He

Community Work

Community work, in all probability, will be taken up in Ogdan this winter, according to the decision made yesterday at a meeting which was held at the Weber club. Advice from Washington are to the effect that the work should be continued and funds will be furnished for the first two months. Rev. John Edward Carver, who is the local secretary, said that work would be resumed.

the big structure in West Ogdan which can be seen from all sections of the city.

Before construction ends, there will be erected, in addition to the grain elevator now being finished, a feed warehouse, concrete molasses tanks, empty-sack storage house, a flour mill of 2500 barrels capacity, a flour warehouse, office building, power station house, machine shop and a garage. The

Forty earload bins in the working house.

Six receiving sinks, discharging on to two conveyor belts, leading to four lofting elevators, or links, all of which receive, ship and transfer.

The elevators each have a capacity of 10,000 bushels an hour.

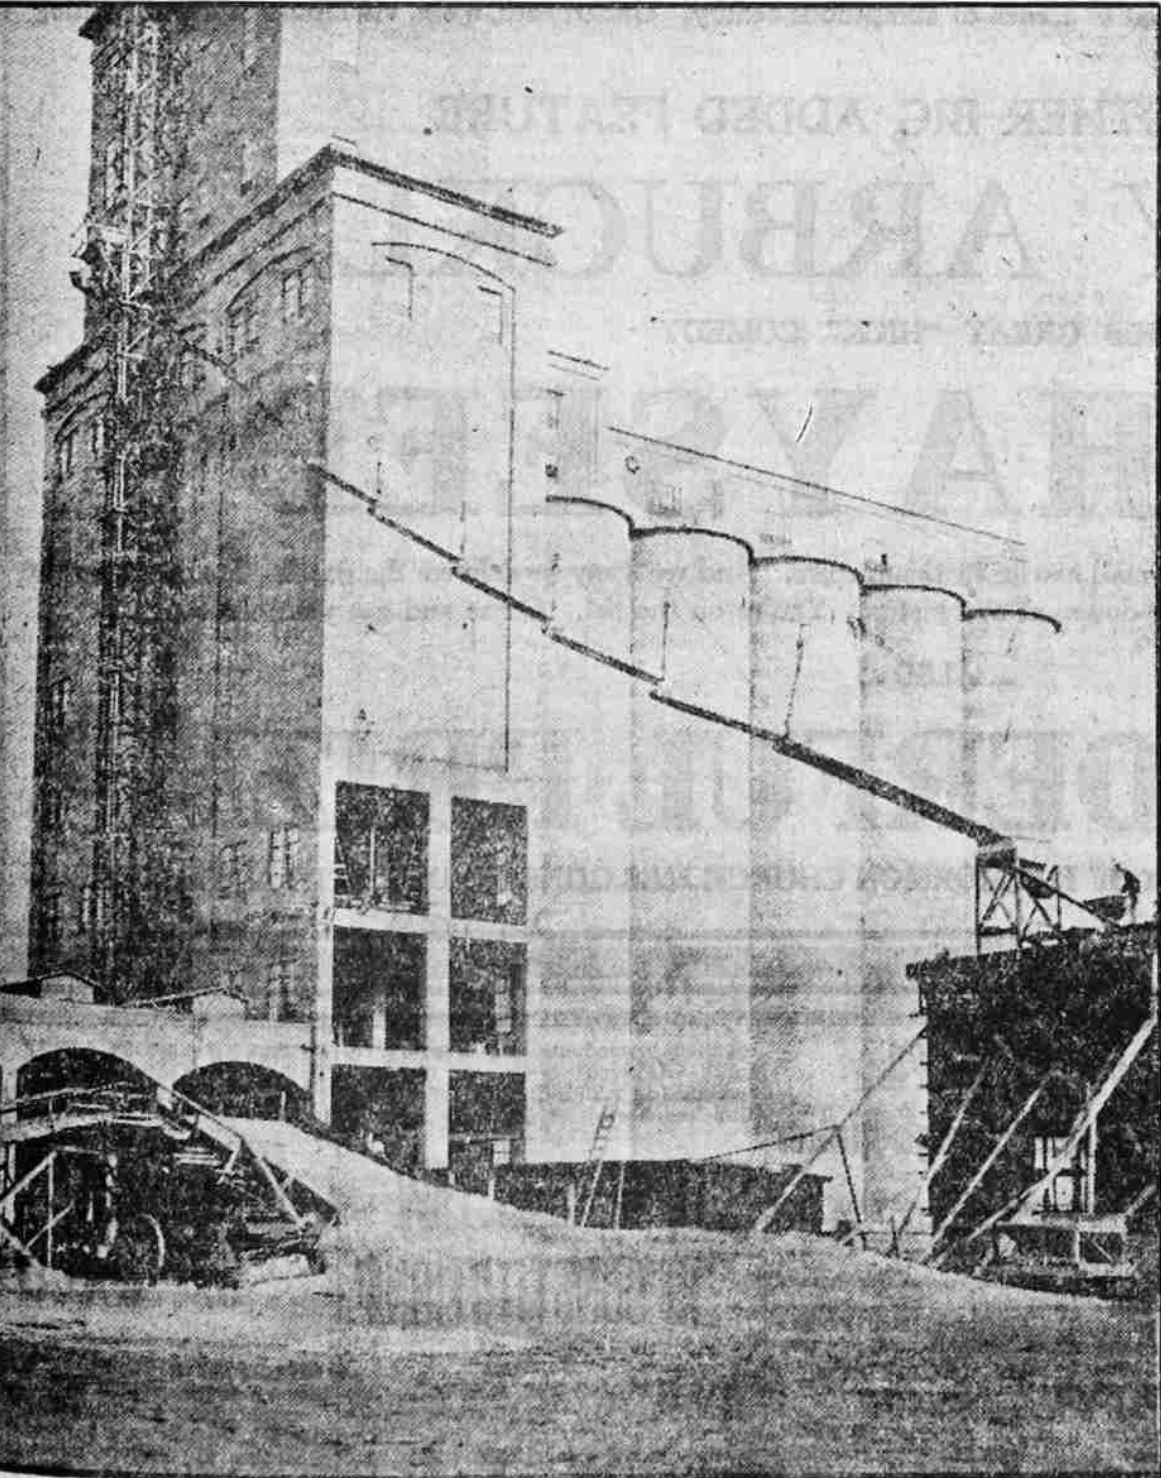

There are, in addition, two cleaner elevators of a capacity of 5000 bushels an hour.

heating and other plant uses.

All the power machinery will be electrically operated.

The car handling equipment in front of the structure will consist of a 75-horsepower car puller capable of moving cars on all three tracks leading into the mill and elevators.

In connection with the feed plant, there will be a screening department caring for the offal of the cereals.

Tanks and Headhouse With Spout From Tower for Pouring Cement.

buildings will have a frontage of 680 feet, and will represent the biggest single unit of the many plants operated by the Globe company. Mr. Keller is quoted as saying that this is the most promising development in grain storage and the manufacture of flour and feed.

Weighing facilities just completed consist of four garner bins at the top of the head house, which receive grain from four elevators, and are situated over four hopper scales which weigh incoming and outgoing grain.

The house is so arranged it can receive, ship, clean and transfer grain at one time.

Each of the 100-foot tanks has a

The ultimate capacity of the feeding mill, which is now building, will be 125 tons a day. Large quantities of alfalfa will be treated in this mill.

Many Buildings.

The massive structures now erected consist, first, of a head house 185 feet high, 31 feet wide and 90 feet long. On top of this is a 12,000 gallon concrete water tank for fire purposes and on
